Remy Smart Brake Calipers

BPI Group, a leading manufacturer, remanufacturer and distributor of Remy starters, alternators, brake parts and steering products has introduced its Smart range of calipers.

An affordable alternative for OEM parts

Remy Smart brake calipers meet the same specifications and quality requirements for fit and function, and are an affordable alternative to OEM parts.

Remy Smart brake calipers come fully assembled; tested and validated components are reliable under extremely high and low pressures, temperatures and during realistic endurance tests.

The Remy Smart product range includes spare parts for price-conscious consumers, with over 180 references, we cover the vast majority of the current European car fleet.

Smart replacement for OEM parts

Remy places high demands on the Smart range of spare parts and does not compromise on quality.

Remy Smart brake calipers use age-resistant rubber seals to resistant moisture, salt and dirt, allowing the pistons to smoothly retract into the brake caliper. Quality seals provide optimal function throughout intense exposure to the elements making them suitable for all conditions.

Remy Smart brake calipers deliver fit and function, and perform as well as the Original parts and have a 12 months guarantee from manufacturer workmanship.

Remy Smart Brake Calipers characteristics

- New
- Reliable
- Affordable
